SUMMARY

Frontend Developer with **2+ years** of experience building high-performance, real-time web applications and SPA architectures. Specialized in React.js, TypeScript, and modern frontend ecosystems, with strong expertise in cross-browser compatible interfaces, component-driven development, and seamless UI/UX implementation. Experienced with full-stack JavaScript, responsive design, and real-time systems. Strong track record of delivering production-grade solutions in fast-paced, Agile environments at startups.

SKILLS

Core Expertise	React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, SPA Architecture, Real-Time Systems
Frontend	Next.js, Tailwind CSS, React Router, Framer Motion, Responsive UI
State Management	Zustand, React Context API, React Hooks
Backend & Realtime	Node.js, Express.js, WebRTC, Socket.IO, REST APIs
Tools & Deployment	Vite, Git, Vercel, Netlify, Figma, jsPDF

WORK EXPERIENCE

Frontend Developer – BeePrecise Bengaluru, India — Oct 2023 – Nov 2025

- Built real-time IoT monitoring dashboards for beehive systems, visualizing live sensor data such as temperature, humidity, and hive health metrics enabling data-driven decision-making for apiaries.
- Optimized frontend performance by implementing API call optimization and caching strategies, measurably improving dashboard load times and user responsiveness.
- Architected and delivered reusable, modular React components following component-driven development patterns, accelerating feature delivery across the product.
- Integrated ML-based prediction models into the frontend, enabling real-time visualization of hive health classification and anomaly detection.
- Managed complex application state using React Context API and hooks; showcased product at Krishi Mela 2024 with live demonstrations to agricultural stakeholders.
- Collaborated closely with backend, hardware, and design teams to ship full-stack features in fast-paced startup environment.

Founding Team – Electronix AI Bengaluru, India — Jan 2025 – Nov 2025

- Led hiring and recruitment efforts, identifying and onboarding early-stage talent to support product development.
- Contributed to product direction, workflows, and initial feature requirements through research, planning, and brainstorming sessions as part of the founding team.
- Participated in establishing product vision and go-to-market strategy for a SaaS platform during early-stage development.

Freelance Frontend Developer

Bengaluru, India — Dec 2025 – Present

- Built responsive, production-grade websites for small businesses; deployed via Vercel and Netlify with automated CI/CD pipelines.
- Designing and iterating on client-facing interfaces with focus on accessibility, performance, and user experience.

PROJECTS

Wishcraft – Personalized Website Builder for Special Occasions

[\[Link\]](#)

React 19, TypeScript, Tailwind CSS v4, Framer Motion, Supabase, EmailJS

- Architected a dynamic theming engine re-injecting CSS variables on-the-fly, enabling users to select from multiple visual themes without page reloads.
- Built a guided creation wizard with multi-step forms, image compression, HEIC support, and one-tap WhatsApp sharing with unique magic links.
- Designed responsive mobile-first UI with Framer Motion animations, React Context state management, and Vercel CI/CD deployment.
- Integrated Supabase for data persistence and EmailJS for notification delivery, creating a seamless end-to-end user experience from creation to sharing.

Gettransfr – Peer-to-Peer File Sharing App

[\[Link\]](#)

React 19, TypeScript, WebRTC, Socket.IO, Node.js, Express.js

- Architected browser-based P2P file-sharing system using WebRTC, Web Workers for 60fps UI performance, and File System Access API for optimized disk writes.
- Built scalable Node.js/Express signaling server handling WebRTC offers, ICE candidates, and multi-device discovery with Framer Motion animations.
- Implemented real-time progress tracking and Socket.IO integration for seamless peer communication across multiple devices and browsers.
- Leveraged modern browser APIs (Wake Lock API, File System Access) to enable uninterrupted background transfers with direct local file system access.

FadeX – Zen-Mode Screenwriting Application

[\[Link\]](#)

Next.js 16, TypeScript, Zustand, Tailwind CSS v4, jsPDF

- Built block-based screenwriting editor with context-aware smart typing, Fountain syntax detection, and predictive character/location suggestions.
- Implemented modular Zustand state architecture with middleware persistence, 50-level undo/redo system, and memoized rendering for 100+ page documents.
- Developed offline-first PWA with scene navigator, drag-and-drop reordering, and high-fidelity PDF/Fountain export using jsPDF and html2canvas.
- Built intelligent auto-formatting engine that predicts next block type (e.g., after Character block, auto-creates Dialogue block), reducing friction in the writing process.

EDUCATION

Bachelor of Science (Physics, Mathematics, Computer Science) – Vijaya College, Bengaluru — 2018 – 2022
